TERMS OF REFERENCE

I. RATIONALE

The Philippine National Oil Company (PNOC) is a key player in the oil and gas industry, where a robust ICT infrastructure, particularly reliable Internet connections, is critical to maintaining operational efficiency. As a leader in this dynamic sector, PNOC continually adapts to evolving technologies, ensuring its IT systems are aligned with the company's strategic vision and operational goals.

The effective use of IT resources has been instrumental in enhancing PNOC's business operations. Central to this is the Internet connectivity, which form the backbone of the company's corporate IT infrastructure. Ensuring the high availability, reliability, and optimal performance of these connections remains a top priority for PNOC's management. As the Internet rapidly evolves, providing access to global resources, multimedia capabilities, and user-friendly tools, its importance in supporting business operations continues to grow.

To stay ahead of technological advancements and meet increasing demands, PNOC management has approved an upgrade to a 200 Mbps Dedicated Leased Line Internet connection. This upgrade aims to enhance connection quality, reliability, and speed while providing a more cost-effective solution. The increased bandwidth will better equip PNOC to

meet the growing needs of its employees by facilitating faster communication, more efficient collaboration, and improved online functionality. This enhancement will support key operations such as online collaboration, email communication, research, virtual meetings, training, and other essential activities.

To fully leverage this upgraded infrastructure and ensure uninterrupted performance, it is also recommended that PNOG implement a 100 Mbps redundant connection. This secondary connection will offer failover support in case of primary connection failure and act as a load balancer, optimizing Internet traffic distribution and minimizing disruptions to business operations.
